Experience

Software Engineering Intern, CanWorks – Toronto, Ontario Mar 2026 – Present

- Build email-based two-factor authentication (enrollment, one-time-code challenge, account recovery), hardening the Supabase auth flow on a FastAPI, Next.js, and PostgreSQL platform used by 50+ active users
- Remediated a row-level security gap on a user-scoped Postgres table, restoring per-user data isolation, and enforced daily quotas on AI endpoints to prevent abuse and quota exhaustion
- Reduced attack surface in an inherited codebase by removing unused ML dependencies and migrating third-party API credentials to a scoped account, cutting deploy time to under 4 minutes
- Led a zero-downtime cross-region cloud migration with instance right-sizing, cutting hosting costs 44%

Software Engineering Intern, Community of Guardians – Toronto, Ontario (Remote) Apr 2026 – Jun 2026

- Fixed a critical mobile bug affecting all users by tracing a structural React rendering issue across 7 components, shipping the fix with zero desktop regressions
- Shipped 5 mobile UI features across onboarding, social feed, and profile pages, keeping CI green on all 6 pull requests to a shared TypeScript monorepo

Full-Stack Developer, Hatchloom – Calgary, Alberta (Remote) Jan 2026 – Mar 2026

- Led a team of 4 building a Node.js and Express backend with 20+ RESTful endpoints and 8+ normalized PostgreSQL schemas for user management, content workflows, and social features
- Implemented secure authentication, role-based access control, and server-side input validation across registration and submission flows
- Deployed with CI/CD automation, cutting release time to under 2 minutes and average API latency ~30% while supporting 100+ concurrent users

Robotics Technical Specialist, Ignite Tech Play – Toronto, Ontario Sep 2022 – Jan 2024

- Ran 10+ corporate team-building events for clients including Shopify, TD Bank, and Gladstone House as on-site technical lead and primary client contact, diagnosing EV3 and Mindstorms failures live and mentoring 20+ teams

Projects

FalseLeaders TypeScript, React, Fastify, PostgreSQL, Redis

- Designed a 12-module Fastify and PostgreSQL API secured with JWT authentication and Redis caching, backing a platform scoring Canadian MPs on controversies, funding, and voting record
- Built the scoring engine as a configurable model with database-stored weights and an LLM news-article analyzer

DidTheyHockey TypeScript, React, Node.js, Railway

- Built and shipped a live streak game covering all 32 NHL teams, reconciling the official NHL API with historical roster datasets into a validated answer key; runs in production on Railway with a recurring user base

Education

York University - Lassonde School of Engineering – Bachelor of Science in Computer Science Oct 2026

- Relevant Coursework: Computer Security (authentication, encryption, vulnerability analysis), Database Systems, Design and Analysis of Algorithms, Stack-Based Programming

Skills

Security: JWT, MFA, RBAC, PostgreSQL row-level security, rate limiting, encryption, vulnerability analysis

Programming: Python (FastAPI, Django), Java (Spring Boot), JavaScript/TypeScript, SQL, C, Kotlin, Bash

Technologies: React, Next.js, Node.js, Express, PostgreSQL, MySQL, Supabase, Redis, Docker, Git, Linux, JUnit

Certifications: CompTIA Security+ (in progress, exp. Dec 2026)
